Abstract

When a breach happens knowing what to do and how is vital for ensuring important information is not destroyed and that the forensic investigation process adheres to standard police principles for maintaining continuity of evidence.

The process of investigating a sophisticated cyber breach can be incredibly difficult. As the frequency of cyber attacks and potential breaches increases, organisations will need to adapt and enhance their forensic investigation capabilities to ensure they have fast access to experienced, skilled people in order to investigate cyber incidents quickly, effectively, and in line with the required legal processes.
