

How Can We Prevent the Pregnant Women from Having COVID-19 Without Using Vaccine?

Abstract

Introduction: COVID-19 is a disease caused by SARS-CoV-2 infection that is affecting all kinds of populations nowadays, independent of age, gender, co-morbidities or not and also, can affect pregnant women. There were some deaths reported in some countries of pregnant women after COVID-19 vaccination and in Brazil, there is a rule to prohibit the vaccination of pregnant women after these incidents.

Purpose; to demonstrate that pregnant women has chakras' energy deficiencies (reduced immune system), as the same deficiency in the entire population nowadays, classifying them as immune-depressant and not immune-competent, demonstrated in the article Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection.

Methods: thought one case report of pregnant patient with chakras' energy centers deficient in energy in all six of seventh chakras' energy centers.

Results: the patients was orientate to begin the intake of medications in highly concentrations such as homeopathies according to the theory Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine and crystal –based medications to replenish this energies to fortify the immune system and also, the intake of SARS-CoV-2 nosodium (homeopathy medications using patients with SARS-CoV-2 secretions to do this medications in a very high diluted) to prevent the acquisition of SARS-CoV-2 infection.

Conclusion: pregnant patient has low energy in the chakras' energy centers and the treatment of this condition before during and after the pregnancy is of paramount importance to prevent SARS-CoV-2 infection, fortifying the immune system of all these patients when the use of vaccine is not recommended or has any side effect that can cause doubt in the prescription of this way of prevention and other forms of preventions should be sought, fortifying the energy and the immune system of pregnant and no pregnant women nowadays.
